Flooding status in the Pittsburgh Seam - Moundsville, WV-OH, Quadrangle

Legend:
- Water monitoring point
- Sealed shaft
- Pittsburgh coal outcrop
- Unsealed coal mine
- Flooded or flooding

This mapping is a reasonable, but not exact, facsimile of the distribution of underground mine areas. Mine map outlines were compiled from a variety of original and secondary sources of varying accuracy. While the absolute accuracy of specific barren locations, mine outlines, and unsealed coal blocks may not easily be estimated, it may be considered to typically range from 50-100 meters. Mine features have been generalized, and the influence of water on surface conditions is beyond the capability to be generalized. Unsealed coal blocks within mines were mapped only if their total area was greater than about 40 acres.
