Flooding status in the Pittsburgh Seam - Murraysville, PA, Quadrangle

Legend:

- Coal mine boundary
- Flooded area
- Not flooded or unknown

This mapping is a reasonable, but not exact facsimile of the distribution of underground mine areas. Many mine outlines were compiled from a variety of original and secondary sources of mapping accuracy. While the absolute accuracy of specific mine locations, mine outlines, and unlined coal blocks may not easily be verified, it may be considered to typically range from 30-50 meters. Mine features have been generalized. Individual mines, longwall panels, and pillars are not explicitly shown. Unlined areas on the mine maps were mapped only if their total area was greater than about 40 acres.
