Flooding status in the Pittsburgh Seam - Waynesburg, PA, Quadrangle

Legend:
- Monitoring point
- Shaft
- Area of active mine
- Flooded or flooding
- Not flooded or unknown

Flood status:
- Active mine
- Flooded or flooding
- Not flooded or unknown

Base map data from the U.S. Geological Survey, Waynesburg 7.5-minute topographic quadrangle map.

This mapping is a reasonable, but not exact, facsimile of the distribution of underground mine areas. Mine map outlines were compiled from a variety of sources, including aerial photographs, mine plats, and coal company data. While the absolute accuracy of specific barrier locations, mine outlines, and unmined coal bodies may not easily be verified, it may be considered to typically range from 30-50 meters. Mine features have been generalized, individual mines, tunnels, pillars, and fill areas are not explicitly shown.

Unlined-out blocks within mines were mapped only if their total area was greater than about 40 acres.
